WORK

Control Engineer

04/2025–Present

Heraeus Quartz North America

- Design and develop new control systems for SZUG (fiber quartz glass manufacturing machines), increasing overall equipment effectiveness.
- Architect software and hardware integration for logic control, tower and puller motion, and temperature/oven power regulation.
- Integrate precision measuring components and develop comprehensive HMIs for system monitoring and operation.
- Pioneer a new oven heating control system and a novel nitrogen pressure control system, boosting product yield.
- Complete electrical schematics and layouts using EPLAN.

Full Tenured Professor

11/2001–11/2022

School of Mechanical and Automotive Engineering, South China University of Technology

- Pioneer machine controller hardware/software co-design using Model-Based System Engineering including simulation, verification, and automated code generation for controller design and implementation.
- Innovate multiple hardware/software machine controller platforms that were successfully commercialized in the China controller market.

CTO

11/2016–11/2020

Shenzhen Qizhong Intelligent Company

- Lead the development of machine controller hardware and software platforms, including motion control, PLC, and EtherCAT engineering and runtime environments.
- Innovate multiple DSP/FPGA-based embedded controller platforms and software-based open controller platforms.

CTO

01/2010–05/2016

Shenzhen Shengyu Intelligent Company

- Lead control and vision system development for the Robotic Stiffener Bonder, an automated vision-guided bonding machine for consumer electronics.

EDUCATION

Ph.D., Control Theory and Application

06/1993–end

South China University of Technology

M.S., Mechanical Engineering

04/1988–end

Nanjing University of Aeronautics and Astronautics

B.S., Mechanical Engineering

06/1985–end

Nanjing University of Aeronautics and Astronautics
